

DYNAMIC MOUNT INSTALLATION INSTRUCTION

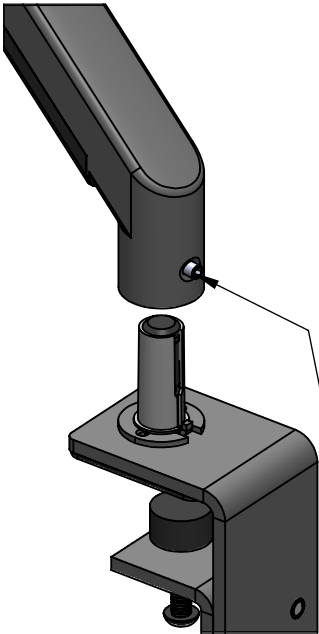

SCREEN WEIGHT : 2 TO 13 Kgs.
COMPATIBLE FOR VESA 75 X 75 & VESA 100 X 100.

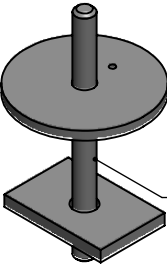

The counterbalance indicator located on top of the upper arm displays the arm's lift force setting, allowing you to see its current adjustment at a glance. This makes it easy to set several arms to the same counterbalance level, even before attaching the monitors.

If the arm rises by itself, lower the lift force by turning the adjustment screw counterclockwise with a 4mm hex key. If the arm drops under the monitor's weight, increase the lift force by turning the screw clockwise.

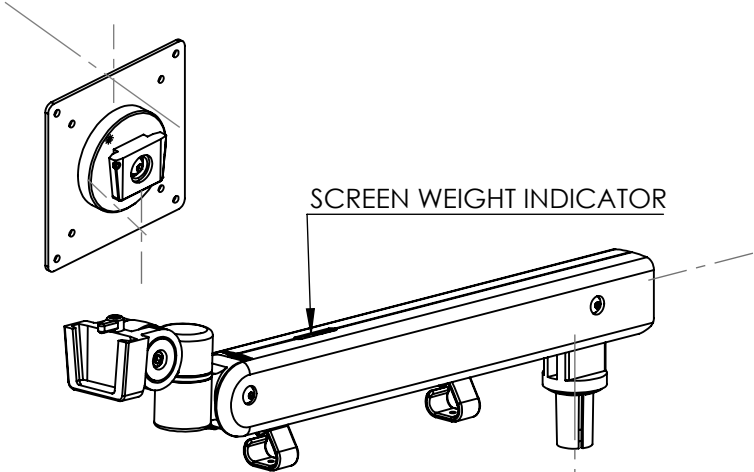

Desk clamp

Grommet clamp

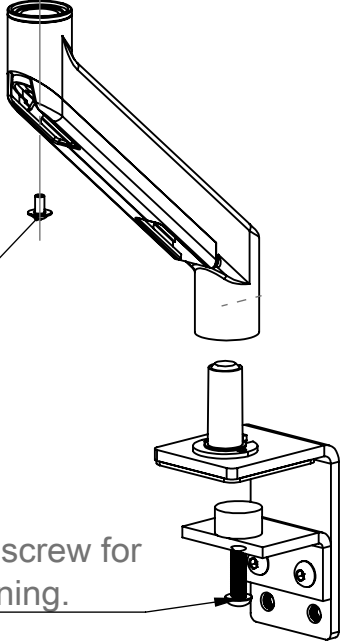

10 mm dia hole to be drilled on the Desk surface to install grommet clamp.
Max desk thickness is 45mm.

SCREEN WEIGHT INDICATOR

Please ensure the bush is placed with the slot aligned with the locking grub screw.

Fasten the M5 Screw to secure the top arm

Fasten the screw for clamp tightening.
